# Academic discipline policy

The academic policy of the discipline is determined by the Academic Policy <u>and</u> the Academic Integrity Policy of Al-Farabi KazNU.

Documents are available on the main page of the Univer IS.

**Integration of science and education.** Research work of students, undergraduates and doctoral students is a deepening of the educational process. It is organized directly in departments, laboratories, scientific and design departments of the university, and in student scientific and technical associations. Independent work of students at all levels of education is aimed at developing research skills and competencies based on acquiring new knowledge using modern research and information technologies. A teacher at a research university integrates the results of scientific activity into the topics of lectures and seminar (practical) classes, laboratory classes and into the tasks of the IWST, IWS, which are reflected in the syllabus and are responsible for the relevance of the topics of training sessions and tasks.

**Attendance.** The deadline for each task is indicated in the calendar (schedule) for the implementation of the discipline content. Failure to meet deadlines will result in loss of points.

**Academic integrity.** Practical/laboratory classes and SRL develop the student's independence, critical thinking, and creativity. Plagiarism, forgery, use of cheat sheets, and cheating at all stages of assignments are unacceptable.

In addition to the main policies, the observance of academic integrity during theoretical training and exams is regulated by the "Rules for conducting final control", "Instructions for conducting final control of the autumn/spring semester of the current academic year", "Regulations on checking students' text documents for the presence of borrowings".

Documents are available on the main page of the Univer IS .

**Basic principles of inclusive education.** The educational environment of the university is conceived as a safe place where there is always support and equal treatment on the part of the teacher towards all students and students towards each other, regardless of gender, race/ethnicity, religious beliefs, socio-economic status, physical health of the student, etc. All people need the support and friendship of peers and fellow students. For all students, making progress is more about what they can do than what they can't do. Variety enhances all aspects of life.

All students, especially those with disabilities, can receive advice by phone/e- mail +77759295274 / mussina.aigerim95@gmail.com , or via video call in MS Teams https://teams.microsoft.com/l/team/19%3AEXobN2cQvJpEY0Z6XkVPfMuU\_rMyQ-Pwn3fFsUhLcGo1%40thread.tacv2/conversations?groupId=776342c7-342f-453a-a5bd-332259d38eac&tenantId=b0ab71a5-75b1-4d65-81f7-f479b4978d7b.

### INFORMATION ABOUT TEACHING, LEARNING AND ASSESSMENT

| Score-rating letter system of assessment of accounting for educational achievements |                                 | ing for educational  | Assessment Methods                             |   |
|---|---------------------------------|----------------------|--|---|
| Grade   | Digital<br>equivalent<br>points | points,<br>% content | Assessment according to the traditional system | Criteria-based assessment is the process of correlating actual learning outcomes with expected learning outcomes based on clearly defined criteria. Based on formative and summative assessment.  Formative assessment is a type of assessment that is carried out in the   |
